# **FALL BULL SALE**

**Sunday, November 6, 2016**

**1:30 p.m.**

**Manhattan Commission Co.**

**Manhattan, Kansas**

Dear Friends,

On behalf of the Cline family we would like to welcome you to the Cline Cattle Company Fall 2016 Bull Sale. 2016 has been a tornado of a year for the agriculture markets. Our focus has always been to keep breeding cattle with the long term goals in mind and not just in the near future. This means concentrating on the economically important traits including reproduction fertility, feet and leg structure, longevity, fleshing ability etc. Our cows that raise bulls for our customers is strictly comprised of several generations of proven problem free producers. We have built our program on the breeds most respected cow families that have produced the finest progeny in the breed for decades. There has never been a better time to freshen genetics and add value to your herd by adding a higher quality, younger, more athletic bull to your program.

This offering is unique as we have several larger 18 month old Angus and Horned Hereford bulls that are ready to go to work on larger groups of females as well as mostly fall yearling Angus, Sim Angus and Red Angus bulls. The quality runs deep in this set and they are very uniform. We have developed the bulls to be rugged athletic animals. They were grown slowly so they could develop like they should not feed hard to be fat. The 18 month bulls ran on native grass pasture until mid Aug. The fall yearlings were weaned late June and grown slow in a large developing pen and grazed on sorghum sedan. The bulls are walked through and handled on foot so that they are easy to handle and used to people.

The bulls have all passed a BSE exam by Dr Tom Taul at KABSU and were carcass ultrasounded by Casey Worrell. The bulls will be available to view anytime at the farm and then on Saturday November 5th by Noon at Manhattan Commission Co. They sell fully guaranteed and are ready to go to work for you. Do not hesitate to give us a call if we can be of any help on assisting you with making selections for your progressive program.

Thanks for your interest in our program.

*Lance, Lynette, and Lex Cline*

*Austin, Shenan, and Dorothy Cline*

# Cline Cattle Company Pick of the Pen Bull Sale

Sunday, November 6, 2016  
1:30 p.m.

**Sale Site:** Manhattan Commission Company  
8424 East Highway 24  
Manhattan, KS 66502  
Sale Day Phone: 785-776-4815

**Contacts:** Austin & Shenan Cline – Frankfort 785-565-3246  
Lance & Lynette Cline 785-564-1744  
Auctioneer: John Cline – Onaga 785-532-8381

**Sale time: 1:30 p.m.**

**A complimentary meal will be served before the sale.**

**Absentee bidding:** Anyone who cannot attend the sale is more than welcome to come evaluate the bulls anytime prior to sale day. We will be more than happy to fill your orders over the phone or a direct bid in a very fair manner. We will offer sight unseen guarantees!

**Delivery:** We offer free delivery within a 300 mile radius. However we will give a \$50 discount per bull with a \$100 maximum if picked up on sale day or that weekend.

**Accommodations:** Hotels are located in Wamego and Manhattan. We will be more than happy to locate you a room upon request.

**Repeat Customer Appreciation incentive:** We offer our repeat customers a \$50 referral credit towards a new bull if they bring a new customer to the sale that makes a purchase.

**Update Sheets:** Info on update sheets take precedence over whats printed in catalog. Updated EPD's with HD50K profiles will be available. Bulls will be semen tested, given breeding vaccinations, and poured at semen testing time.

**Retaining Interest:** We are retaining a 50% semen interest in all bulls selling. Ask for further details. This has been our standard practice since the beginning.

**After Sale Bull Care:** If you are not ready to take your bull(s) at sale time, Cline Cattle Company will offer a winter care program until April 1, 2015. Any out of the ordinary expenses (vet etc.) will be the responsibility of the owner. There will be no guarantee against injury or death other than we assure you that care of the bulls will be to the best of our ability. We recommend that you protect your investment with insurance.

# Angus Breed Averages

## Breed Average EPD and \$Value

CE	BW	WW	YW	SC	CEM	Milk	CW	Marb	RE	Fat	\$W
5	1.8	49	86	.81	9	23	30	.45	.45	.011	36.35
											\$F
											35.09
											\$G
											29.87
											\$B
											84.61

**Calving Ease (CE)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

**Calving Ease Maternal (CEM)**, is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness EPD (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

## \$VALUE INDEXES

**Weaned Calf Value (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

**Feedlot Value (\$F)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

**Grid Value (\$G)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Beef Value (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

Animal's EPD's genomically enhanced using Pfizer HD50K evaluation.

# Simmental Breed Averages

## Breed Average EPD

CE	BW	WW	YW	MCE	MM	MW	CW	YG	MB	BF	REA	API	TI
8.7	1.9	63.2	98	9.4	22.1	53.6	26.9	-0.31	0.14	-0.06	.79	120.60	67.40

### ***EPDs - values above or below breed average***

- CE Calving Ease - % unassisted births from two-year old heifers.
- BW Birth Weight - pounds of birth weight
- WW Weaning Weight - pounds of weaning weight due to growth.
- YW Yearling Weight - pounds of yearling weight due to growth.
- MCE Maternal CE - % unassisted births from calving daughters.
- MM Maternal Milk - pounds of weaning weight due to dam's milk.
- MW Maternal WW - pounds of weaning weight due to dam's milk and growth.
- CW Carcass Weight - pounds of carcass weight.
- YG Yield Grade - tenths of a yield grade.
- MB Marbling - percent of marbling score or %IMF
- BF Back Fat or Rib Fat - inches of carcass back fat thickness.
- REA Ribeye Area - square inches of ribeye
- API All Purpose Index - \$ per cow exposed under an all-purpose-sire scenario.
- TI Terminal Index - \$ per cow exposed under a terminal-sire scenario.

### ***Ultrasound Measurements Explained***

**Fat Thickness** - measured at the 12th-13th rib and reported in inches. Most of the fat thickness measurements on these bulls are in a very desirable range; which means they have some fat cover, but are not fat.

**Ribeye Area** - measure at the 12th-13th rib and reported in square inches. REA is an important component of the USDA yield grade determinations of beef carcasses. Larger ribeyes result in more desirable yield grade numbers and a higher percent of the carcass as trimmed retail product. Yearling bulls should have at least 1.1 square inches/100 lb. of live weight, and larger ribeye areas are generally more desirable. However, extremely large ribeyes ( $\geq 1.3$  square inches/100 lb. of live weight) are not necessarily desirable.

**%Intramuscular Fat** - percentage of Intramuscular Fat, (%IMF) measured in a longitudinal scan of the ribeye muscle from the 11th to the 13th rib. It is a measure of marbling, which is the primary factor that determines USDA quality grade of carcasses. %IMF values for yearling Simmental bulls generally fall in the range of 2.5 to 4.0%.

**Yield Grade** - EPDS for Yield Grade are calculated from ultrasound measurements. YG is the USDA grading system for determining % meat yield differences among carcasses. USDA yield grades are numbered 1-5, with 1 representing a very muscular, trim carcass with a high % meat yield; and a 5 representing a very fat, light-muscle carcass with a low % meat yield. Yield grades can be calculated to the nearest 10th, such as 2.5, 3.9, etc. The average range for Simmental sired progeny would be about 2.2-2.8.

50 is straight Line 1 breeding directly from Cooper Herefords in Montana as his dam was our pick of the 2014 Cooper sale. His sire, 177R is one of the top sires in the breed for calving ease, growth and muscle. His sons and daughters have been topping sales across the country. This is a 100% pigmented red necked, red legged bull that would work on rwf or blk cows. Potential heifer bull with supervision. Bw 76 lbs.

Out of Ebony's Grandmaster and one of our highest producing cows each year, this SimAngus powerhouse is sure to make friends sale day. He's packed full of meat and muscle and is very attractive and structurally correct. Expect this bull to add performance and muscle to a set of calves to punch the scales down!

The only purebred Simmental bull in the offering but a really good one! This heavy muscled, moderate framed son of Tanker is the type we strive to raise being wide based and deep bodied. His excellent dam is still very sound structured and good footed along with being excellent uddered yet at nearly 13 yrs of age.

A standout son of the ABS Calving Ease featured sire BPF Special Focus and a top 3 yr old cow by TNT Tanker. A lot of thickness and muscle here. Expect this bull to add some power to a set of calves. Replacements would be very nice by this bull as well. His dam is a beautiful uddered cow with a excellent disposition.
